## What is a CertMark Product Certification Certificate?

A CertMark Product Certification Certificate is classed as a system 5 product certification scheme. Certification is based on the supply of test reports, manufacturing audit, document audit and on-going annual audits.

## What are the benefits?

A CertMark Certificate shows conformity to one or more standards or clauses. The process to gain certification is quicker than many other schemes. Certification is not just for the building and construction Industry, but is widespread across all industries.

## How long does certification take?

Certification time frames are dependent on the readily available documents and supporting evidence, site audit locations and any other resources that may be required for your organisation.

## How much does it cost?

We approach every certification differently. From your free, no-obligation certification enquiry we complete a tailored certification proposal for you, which outlines the fees associated with your Pro-Cert Certification.

“ CertMark International have proved to be an excellent partner in the assessment of our Muster<sup>II</sup> Fire Suppression product.

Everyone within their team were helpful & understanding of exactly what we needed to achieve project completion & hit every check-point as promised.

We will definitely use CertMark International again for our next project. ”
